RE: Nature Energy Project in Roberts, WI

Dear President Moeri and Trustees:

Compeer Financial is a member-owned, Farm Credit cooperative serving and supporting agriculture and rural communities. From our regional office in Baldwin Wisconsin where we serve many dairy and crop operations in Western Wisconsin. The Nature Energy Biogas Project planned for Roberts, Wisconsin is a very important project for our local dairy farmer members, because it will provide new and better technologies for handling their manure that are positive for the environment and community.

For many of our local crop farmer members, the Nature Energy Project will provide locally produced fertilizer products that can have a positive impact on water quality in the region. Nature Energy brings exceptional experience in renewable energy technology and professional facility operations from Denmark to Western Wisconsin. The project in Roberts will be the first Nature Energy Biogas Plant to be built in the U.S.

Compeer Financial is proud to support the Roberts Nature Energy Project.

Sincerely,

Greg Steele
